Mikhail Laptev

Senior DevOps Engineer · Platform Engineering

10+ years in infrastructure, the last five on PandaDoc's platform team (~250 engineers), making Kubernetes cheaper and safer to run. AI-first, building with multi-agent workflows.

SKILLS SUMMARY

Cloud & IaC	AWS, Terraform / Terragrunt, Ansible, Helm, Docker, Linux
Kubernetes	EKS, Karpenter, KEDA, VPA/HPA, Istio, Kyverno, Vault, Traefik
CI/CD	ArgoCD (GitOps), GitHub Actions, GitLab CI, Jenkins
Observability	Grafana LGTM stack (Grafana, Loki, Prometheus, Mimir), Sentry, Opsgenie, Rootly
Data	PostgreSQL (RDS), PgBouncer, RabbitMQ, Kafka (MSK), Redis (ElastiCache)
Code & AI tooling	Python, Bash; Claude Code, Cursor, multi-agent orchestration, agentic workflows, MCP
FinOps	cost attribution, tagging, rightsizing, Savings Plans & RIs; Finout, AWS Cost Explorer
Languages	English - professional working proficiency (B2); Russian - native

PROFESSIONAL EXPERIENCE

2025 - 2026 **Senior DevOps Engineer**, PandaDoc (document automation SaaS) · Remote

- Migrated ~100 infrastructure repositories from GitLab CI to GitHub Actions with AI-agent automation and no disruption to developers; owned the multi-layer Terraform part.
- Contributed to the reusable GitHub Actions library that standardized pipelines org-wide.
- Rolled out VPA rightsizing across all clusters including production; CPU and memory requests fell ~40% and workload idle ~50%, with self-service profiles for teams.
- Expanded the network address space of a live production Kubernetes cluster to unblock its scaling, through a full rehearsal and a staged, checklist-gated cut-over.
- Built a cost analytics pipeline that unified data from billing providers into a single view, with dashboards used from directors to developers; helped automate the monthly cost report.

2021 - 2025 **DevOps Engineer**, PandaDoc (document automation SaaS) · Remote

- Developed a Kubernetes operator that puts ~60 staging environments to sleep outside working hours, cutting staging spend by 53%.
- Migrated staging stateful services (PostgreSQL, Kafka, RabbitMQ, Redis) from EC2 to Kubernetes, cutting staging infrastructure cost by 42%.
- Built cost attribution by org unit and service in Finout (~90% of workloads tracked, **case study**); the FinOps initiative hit 261% of its savings goal via rightsizing, Savings Plans & RIs.
- Led root-cause fixes for production incidents in cluster networking and messaging, adding guardrails and observability. Incident response / on-call.
- Facilitated Kubernetes upgrades; moved container and Helm registries to Amazon ECR.

EARLIER EXPERIENCE

2020 - 2021 **DevOps Engineer**, Align Technology (medical devices)

- Took 3 greenfield apps to production on AWS EKS with dynamic per-app environments.

2019 - 2020 **DevOps Engineer**, MoySklad (ERP SaaS for SMBs)

- Tuned OpenShift infrastructure for 120k concurrent users; launched a new region.

2017 - 2019 **DevOps Engineer**, ILS Group (document management SaaS)

- Rebuilt and scaled on-prem SaaS production for 3,000 concurrent users.

2014 - 2017 **System Administrator**, PMSOFT (project-management software)

- Moved infrastructure from bare metal to VMware vSphere, leading a two-person team.

EDUCATION & CERTIFICATIONS

2021 **AWS Certified Solutions Architect - Associate**

2011 - 2015 BSc Information Systems and Technologies, MTUCI, Moscow
